

NACHHALTIGKEITSSTRATEGIE MÜNSTER 2030

MÜNSTER'S SUSTAINABILITY STRATEGY 2030

ORGANISATIONAL STRUCTURE

PROCESS

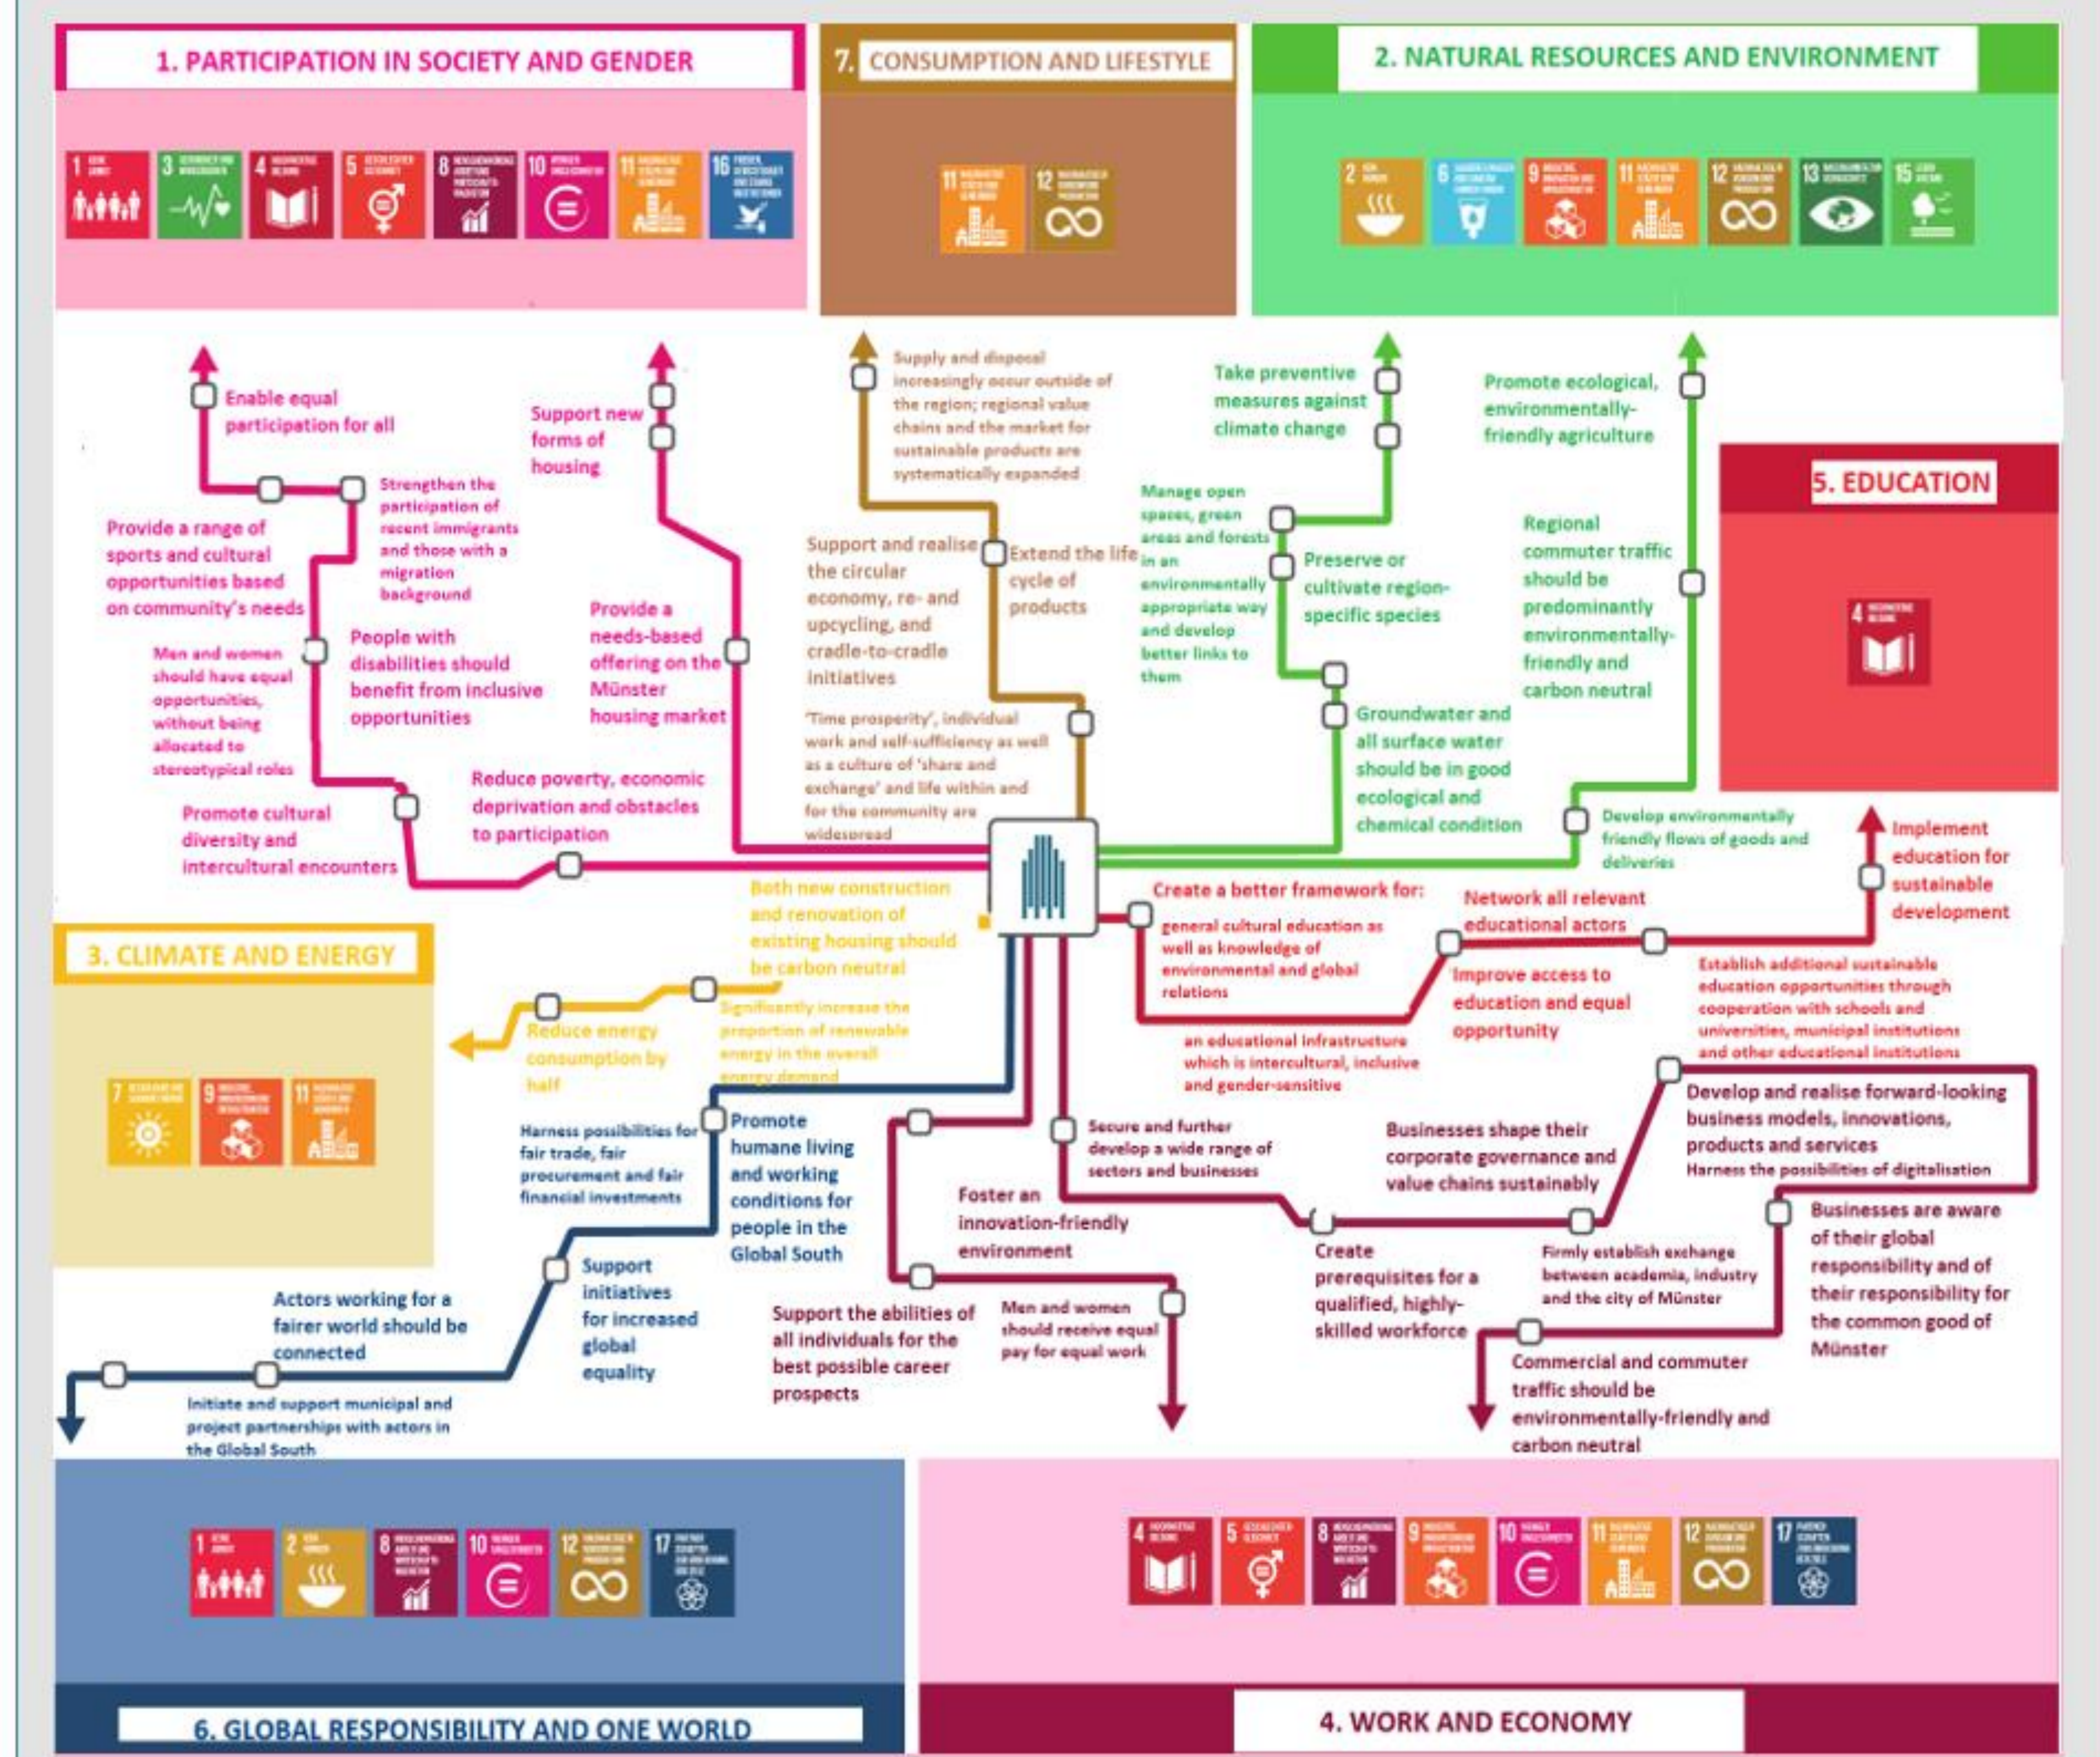

- In Münster, seven subject areas were prioritised for further revision on the basis of the given project framework, the results of the initial review of the situation, an online voting of the advisory board, and intensive discussion between all participants.
- A unique feature of Münster's approach in their project model is the broader involvement of the administration. In parallel to the respective steps and results of the project advisory board, comments and advice of the administration, consisting of 22 offices, were provided in writing in an additional internal administrative workshop.
- In addition to the administration, politicians were continuously informed about the status of the project. In April 2017, a progress report of the project took place in 16 committees and management boards, and in October 2017 a council resolution, Sustainability Strategy Münster 2030, was prepared by the advisory board, complete with thematic guidelines and a list of strategic goals. A political decision regarding this strategy is expected to be reached by mid-2018. This will be followed by the ongoing development of the action programme, the start of its implementation and the establishment of a monitoring and evaluation system.

GLOBAL RESPONSIBILITY AND ONE WORLD

- Operational Objective:** The city of Münster will orientate its procurement to the following criteria by 2030:
- Products obtained from the Global South will be - where available - up to 100% fair trade, organically produced goods. This also applies to local companies and produce. By 2025, initial projects for fairly-produced work clothes will be implemented in at least three offices or municipal institutions/businesses.
 - The demand for food will be up to 100% satisfied by seasonal, environmentally-friendly produce from the region (as far as this is available).
- Operational Objective:** By 2025, there will be at least 50 pilot businesses (e.g. social and charitable organisations, production and service companies) which have begun to implement eco-fair procurement and which each source at least five eco-fair products from the Global South and buy at least five products regionally and/or organically.
- Operational Objective:** Besides capital investments, the capital procurement of the city and local businesses will be based on sustainable criteria, which will incorporate at least three substantial requirements into the relevant test directories by 2020.
- Operational Objective:** The city of Münster will create basic conditions for networking between civic actors as well as between political actors in order to achieve the ambitious goal of increased global justice. The city supports the development of more resilient structures and processes for this networking and actively promotes channels of communication and participation for public debate.
- Operational Objective:** By 2020, the city of Münster will undertake at least one city or project partnership (in addition to the existing city partnership with Monastir) with a community and/or actors of the Global South. Furthermore, the city will establish a civil society structure which will accompany and support the project partnership over the long term.
