#BeyondTheOutbreak
• 60% decrease in total number of trips
• Services operated by the Government keep frequencies in peak hours
• Decrease in number of trips is lower in those services that connect low-income peripheral areas, where most of the people work in the informal sector
Urban mobility in the COVID 19 emergency

Three challenges and/or solutions to organize urban mobility in the COVID 19 emergency

- Protect both users and operators (hygiene + social distance). Keep frequencies as much as possible.
- Flatten the demand curve (demand management is possible!)
- Provide clear and daily communication.
Learning from the crises

- Demand can—and should be—managed
- Short-term planning is needed
- Measure, measure, measure
- Adequate communication is extremely important
THANK YOU!
